about

An innovative system of optically active wall decorations.

Based on our broad experience in the field of lenticular printing we have created the only 3-dimensional decorative tiles that are visually dynamic. Let's take a look at some of their assets:

ECOLOGY

The material used in the tiles production is fully recyclable.

ASSEMBLY

Installing the tiles is clean and easy, using double-sided tape.

SAFETY

A rather soft structure lowers the risk of an injury in case of an impact.

PERSONALIZATION

We can create different forms in custom colors and graphics.

TRANSPORT

A large number of tiles can be sent in relatively small packages.

CLEANING

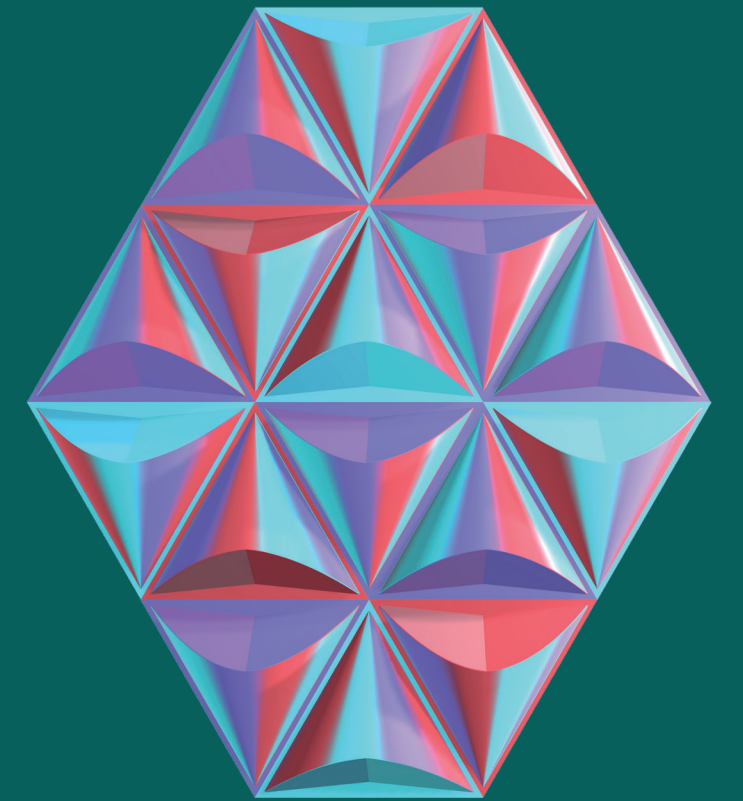

The surface is resistant to spills, dust and most detergents.

4

5

The tiles have the unique ability to change their color or graphic depending on the viewing angle.

They can be easily arranged into different compositions and will give every interior an intriguing character.

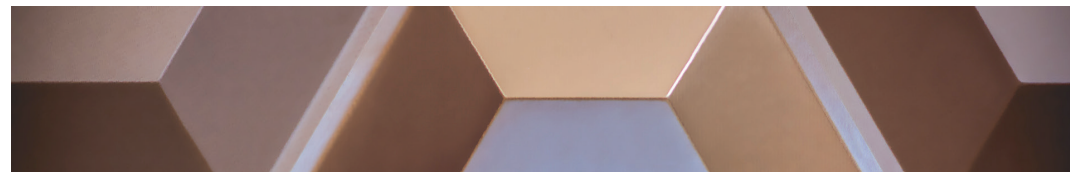

heksa

Explore the endless possibilities with this nature inspired multi-symmetrical shape. Hexagonal outline of the form makes matching effortless, so that you can easily generate an incredibly attractive geometrical structure.

diamond

Inspired by traditional old tile floorings, the octagonal outline of Diamond generates square negative space when tiles are joined together. Create engaging compositions in a dialogue with the background surface!

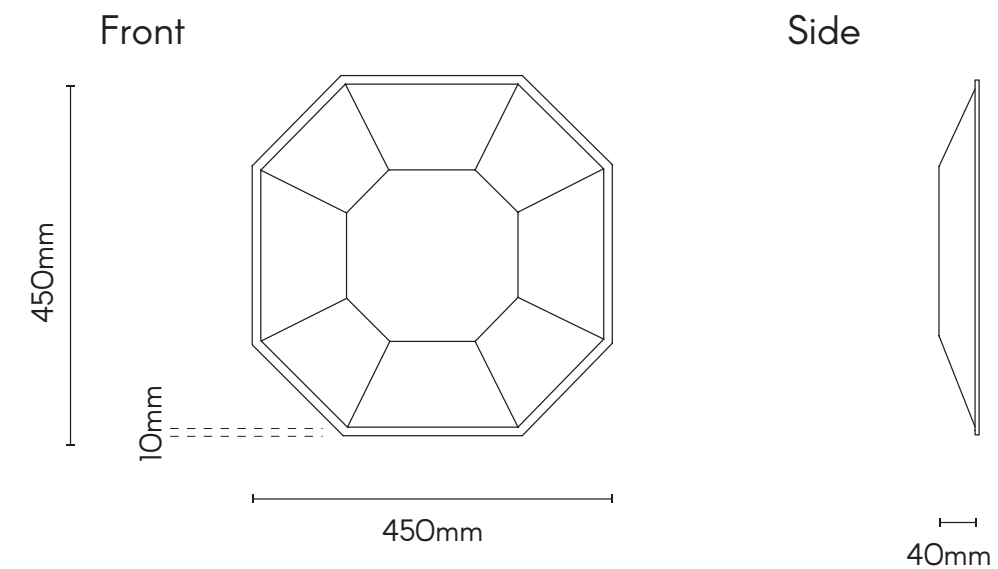

8

9

PERSONALIZATION IS KEY!

Every form we offer can be adjusted to your own vision. Custom graphics or a personalized color palette are not a problem! Check out: www.lentitile.com/configurator

diamond

rocks

Rocks is the ultimate four-in-one. With top edges facing different directions it becomes a great source for a diverse, optically active structure. Enhance any interior with a touch of lenticular dynamics!
